Continuation of 3. NOTE: Applicant seeks to narrow the scope of the claims by amending claims 1, 33 and 43 to include a "single layer" substrate and "a plurality of coatings layered onto said substrate".

Continuation of 11. does NOT place the application in condition for allowance because: Applicant argues there is nothing in US Patent ,250,492 to teach or suggest a single layer of substrate is used in conjunction with two security coatings that each produce separate indicia of tampering in a security document. Applicant has based arguments on the claims as amended, which have not been entered. Examiner maintains Dotson et al discloses a first and second coating where the first coating has a pressure ruptural component and the second coating has a solvent sensitive material (column 6, line 58 through column 7, line 5). If the invention has pressure applied to it or is rubbed, the first coating layer will be damaged, indicating tampering and if a solvent is applied, the second coating layer will show tampering with a covert message. The rejection is maintained for reasons of record.
